

Forefront Identity Manager 2010 Discovery Workshop

(FIM) 2010 Discovery Workshop

This FIM 2010 workshop extends our proven workshop and approach for deploying identity and access solutions using ILM 2007, embracing the enhanced capabilities of FIM 2010. The workshop is designed to help customers understand FIM 2010, its value to the organization, the most suitable approaches to implementation and how to move forward.

Background

The release of FIM 2010 presents many new and important opportunities Microsoft Forefront Identity Manager for identity and access. Building on the success of ILM 2007, with its synchronization, metadirectory, certificate and smart card management and user provisioning capabilities, FIM 2010 adds new features for:

- Policy Management – allowing all enterprise systems to use a common framework for integration, automation and policy management via a SharePoint-based console with workflow capabilities
- Credential Management – enabling integrated management of multiple credentials and user self-service from within the Windows logon environment
- User Management – for automated, codeless provisioning of users, access rights and resources and employee self-service
- Group Management – enhancing security and compliance and increasing user productivity via the provision of employee self-service and tight integration with Microsoft Office
- Improved extensibility and developer options

This workshop is applicable to organizations considering the use of FIM 2010 for the first time and to those who have already deployed a solution for identity and access and who need to understand the benefits of upgrading to FIM 2010, along with the business and technical approach they should take.

Engagement

This engagement involves a combination of workshops, interviews, and reviews of current technology, approaches and best practices to understand the current environment, the desired environment, and the required roadmap to get there. The workshop has become a standard component of the Oxford Computer Group methodology and is used to provide a clear understanding and assessment of the requirements. The value for the customer is education, expert guidance and a set of deliverables which provide the business case and plan for moving forward.

Structure and Aims

Conducted over 5 days, this engagement consists of 2 days for on-site workshops and an additional 3 days for interviews, reviews and formulation of the approach and documentation. The exact scope of the engagement will be agreed in advance, but typically would aim to achieve the following:

- Elicit and share information from project stakeholders
- Provide general education on identity and access management
- Provide education on the capabilities of FIM 2010, highlighting its value to your organization
- Achieve a common understanding of identity and access project aims and objectives
- Develop a high level solution design with suggested project phasing and indicative costs
- Agree key roles and responsibilities for the project lifecycle and the on-going support and management of the system
- Support production of an outline project plan

Forefront Identity Manager 2010 Discovery Workshop

Benefits

- Provides education and guidance on identity and access and FIM 2010
- Encourages a consensus between key stakeholders on the best approach to identity and access and use of FIM 2010
- Identifies preferred implementation options based on current technology, future business requirements and known best practices
- Explores potential business benefits of a FIM 2010 solution platform including: cost savings, efficiency and productivity gains, quality of service improvements and enhanced security and compliance
- Provides a high level roadmap for implementation
- Identifies specific projects on the roadmap, including detailed milestones, timelines, costs, and resources required for the first steps

Results

The output from this workshop is synthesized into a number of planning and design documents which can include:

- Vision Statement and Solution Objectives
- Project Plan and Scope
- Implementation roadmap
- High level design
- Identification of areas where further information is required
- Training needs
- Indicative budgetary estimates
- Schedule for the initial project delivery

What Next?

The follow on to the workshop would be an initial engagement to design, then build and deploy the proposed FIM 2010 solution.
