

Identity & Access Management Engagement Discovery Workshop

■ Background

An implementation typically affects a large number of interested parties. Experience shows that running a workshop early on in the engagement is a very effective means of eliciting and sharing information, which pays dividends later in the project.

■ Workshop

This is a technology workshop aimed at a technical and business audience and is typically made up of a number of sessions of about 2 days' duration – but may be more, depending on the project. The workshop has become a standard component of the Oxford Computer Group methodology, and is used to provide a clear understanding and assessment of the requirements. The value for the customer is education, expert guidance and a set of deliverables which provide the business case and plan for moving forward.

■ Structure and Aims

The Engagement Discovery Workshop consists of a 2 day workshop and 1 to 2 days to plan and document the output. The scope of the Discovery will be agreed upfront, but would aim to achieve the following:

- Elicit and share information from project stakeholders
- Education on Identity and Access Management, the technologies and the value to your business
- Achieve a common understanding of project aims and objectives
- Agree key roles and responsibilities for the project life cycle, and support and management of the ongoing system
- Develop a high level solution structure
- Support production of an outline project plan

■ Results

The output from this workshop is synthesized into a number of planning and design documents including:

- Vision Statement and Solution Objectives
- Project Plan and Scope
- Identification of area where further information is required
- Training Needs
- Accurate budgetary estimates

■ What Next

The follow on to the workshop would be an initial engagement to design, build and deploy the proposed solution.
